SMART DESIGN: COLT

Colt GL, shown in Vivid Red.

On-board diagnostic system, standard, lets Plymouth dealer service technicians electronically interface with the vehicle's on-board engine and body computers. They can then quickly and accurately service your vehicle and maintain it in peak operating condition.

Vista's 2.4-liter SOHC EFI engine is lively and efficient. It has dual balance shafts for smooth, quiet operation, and delivers 136 lb-ft of torque at 3,500 rpm. Optional on all Vista models with either a five-speed manual overdrive transaxle or a four-speed automatic transaxle.

Three-speed automatic transaxle includes an electronic lockup torque converter for economical operation, plus a shift-lock feature for added safety. (Optional on Colt only.)

Vista's full-time all-wheel drive features on-demand traction sensing that shifts torque to the axle that has the most traction. The AWD system utilizes a center differential with viscous coupling to deliver torque to all four wheels. The result is excellent handling and directional stability.

Antilock braking system (ABS) increases steering control and vehicle stability during hard braking. Includes fade-resistant vented front and rear disc brakes. In this advanced, electronically controlled system, wheel rotation sensors trigger automatic brake "pumping," to detect and prevent wheel lockup. ABS is available on all Vista models.

Standard full stainless steel exhaust system (not shown) withstands corrosion-resistance testing. Components from the catalytic converter rearward are made from a stainless steel alloy that extends system life.
